Your name here?

Our people make Pharmetheus.

Our strength comes from how we connect, integrate and link.

Do you want to be the next link in our chain?

Pharmetheus

Systems Developer

Full-time position, work location: Europe

Pharmetheus is a global pharmacometrics consultancy company, focused on applying quantitative approaches to support drug development decisions in all clinical development phases and most therapeutic areas. We offer both strategic advice as well as hands-on modelling and simulation performed in a reproducible reporting environment, within which internal tools and processes are essential. We take great pride in being a reliable and effective collaboration partner to all our clients, offering a workplace where the atmosphere is characterized by a high level of flexibility and a great team spirit. We always aim for equality and value creativity and diversity. Our highly skilled and enthusiastic team brings considerable value to clients and partners, with the aim to improve patients' lives.

Pharmetheus' main premises is located in Uppsala, Sweden. Our physical footprint stretches beyond Uppsala through our office network in Stockholm, Basel and home office networks in Europe and North America.

We are a motivated, dedicated and growing group of 60+ people, currently undergoing exciting developments and we are looking to expand our capacities and capabilities in our tools and process development. Consequently, we are now looking for a new Systems Developer to join our team.

As a Systems Developer, you will:

- Be part of a team for development and designing of internal and external tools.

- Provide technical support for future and existing tools.

- Contribute to improvement of internal processes and tools in relation to company initiatives.

- Participate to the effort of company standardization of the tool's development processes and guidelines.

Your skills and qualifications:

To be a good match for this position, you should have a programming background/education, with at least a Bachelor's degree in system development/software development/programming or equivalent.

It is a strong merit if you have documented experience of programming in R/Shiny since the majority of our tools are developed in R. Furthermore, it's a merit if you have worked with LaTeX, Git, SQL databases, HTML/JavaScript programming, software testing and documentation.

We expect that you are communicative and have a fluent oral and written English. You are flexible, committed to your work, and have a strong sense of responsibility. Further, it is important that you

Pharmetheus

pick up new knowledge quickly and are used to working against a deadline. Moreover, you should be comfortable working in close connection with your colleagues as well as independently.

Do you want to be part of this inspiring work environment where you get challenged and get the possibilities to grow in your profession? If this sounds interesting to you, please submit your application, including your CV and a cover letter by using the form on www.pharmetheus.com/career, no later than August 15th.

If you have any questions in relation to this position, feel free to contact Joakim Nyberg, at joakim.nyberg@pharmetheus.com. If you want to learn more about Pharmetheus, please visit our website, www.pharmetheus.com.
